CONTENTS

Volume 34, Issues 1–6

International Journal of
MATHEMATICAL EDUCATION in SCIENCE and TECHNOLOGY

Issue No. 1, JANUARY–FEBRUARY

The measurement of school students' understanding of statistical variation J. M. WATSON, B. A. KELLY, R. A. CALLINGHAM and J. M. SHAUGHNESSY 1

A new Riccati equation arising in the theory of classical orthogonal polynomials W. ROBIN 31

Flexible on-line assessment and feedback for teaching linear algebra P.F. SIEW 43

A correction term for Gauss–Legendre quadrature H. V. SMITH 53

A multidisciplinary graduate level project-based programme in applied statistics M. M. OJEDA and H. SAHAI 57

Coupled spring equations T. H. FAY and S. D. GRAHAM 65

Revealing hidden mathematics curriculum to pre-teachers using technology: the case of partitions S. ABRAMOVICH and P. BROUWER 81

Polynomial solutions of the classical equations of Hermite, Legendre, and Chebyshev L. E. LEVINE and R. MALEH 95

Classroom Notes

Logarithmic series P. GLAISTER... 105

A note on hypothesis testing for discrete cases K.-Y. CHAN and T.-C. CHUA 111

On teaching binomial series: more meaning and less drill T. TIN-LAM 115

Impact of binary and Fibonacci expansions of numbers on winning strategies for Nim-like games T. OOYA and J. AKIYAMA 121

Illustrating inverse iteration N. T. NEILL 128

Some useful integer arrays for the teaching of generalization skills R. L. OLLERTON and A. G. SHANNON... 135

A new proof of the Pythagorean using a compass and unmarked straight edge M. H. RAHIM 144

An application of the Darboux Property of Derivatives J. TONG and S. HOCHWALD 150

On an unknown algorithm for computing square roots T. EISENBERG 153

A unified approach to teaching quadratic and cubic equations A. J. B. Ward 158

Issue No. 2, March–April

The impact of beliefs in student's learning: an investigation with students of two different contexts E. Diaz-Obando, I. Plasencia-Cruz and A. Solano-Alvarado 161

The concept of rhotrix in mathematical enrichment A. O. Ajibade 175

Matrix derivatives: a diagrammatic notation for multivariable calculus M. D. Pollanen 181

The Gibbs' phenomenon for Fourier-Bessel series T. H. Fay and P. H. Kloppers 199

On the role of kinesthetic thinking in computational geometry J. A. Sellarès and G. Toussaint 219

Classroom Notes

The study of curves using mathematica T. Rossman, T. Hawkins, L. Myers, R. F. Melka and Y. Z. Chen 239

Factorial sums P. Glaister 250

Complex numbers and plane geometry T. DanaPicard 257

Nonlocal advection equations J. D. Logan 271

Radius of convergence of a power series T. D. Todorov 277

Computer derivations of numerical differentiation formulae J. H. Mathews 280

A class of metrics with strangely shaped discs M. Lynch 287

Bernoulli numbers via determinants H. Chen 291

A note on estimating parameters in two-parameter Pareto distributions M. Rahman and L. M. Pearson 298

On decomposing a uniform random variable into its integer and decimal parts V. C. Hombas 307

Fibonacci's multiplicative sequence S. Falcon 310

Letter to the editor N. Gauthier 317

Issue No. 3, May–June

The use of graphics calculators by students in an examination: what do they really do? T. Graham, C. Headlam, S. Honey, J. Sharp and A. Smith 319

Differential and integral calculus III through WebCT: analysis of results C. Cerri and M. C. B. Baru 335

Impact on school assessment where use of graphics calculators is mandatory in a related public examination P. A. Forster, U. Mueller, D. Haimes and J. Malone 343

Filling in the gaps: modelling incomplete CBL data using a graphing calculator D. A. Swingle and L. M. Pachnowski 361

Secondary trainee teachers' understanding of convergence and continuity F. Eade 371

Mimicry of proofs with computers: the case of Linear Algebra O. Hazzan and R. Zazkis 385

Regulation of a prey–predator fishery by taxation T. K. Kar and K. S. Chaudhuri 403

From linear to non-linear optimization: the missing chapter H. Arsham and M. I. Stemberger 417

Classroom Notes

A radiative reaction model T. H. Fay and L. Mead 431

A geometric method for the derivation of a special case of an F-distribution W. I. E. Chukwu 443

A look at billiards J. R. Hanson 446

Iterated integrals: an algebraic approach L. G. Chouinard II 451

A combinatorial look at the election of a US President R. T. Harger 459

A note on the MacKendrick Von Foerster type model in a population with genetic structure J. M. Tchuenche 463

Summing sequences having mixed signs T. H. Fay and G. L. Walls 470

Issue No. 4, July–August

Engendering proof attitudes: can the genesis of mathematical knowledge teach us anything? D. Almeida 479

Some combinatorics of multisets D. Singh and J. N. Singh 489

The demand of a task M. T. Talbi 501

Fourier series and elliptic functions T. H. Fay 527

NP-harsh problems in education J. Rodríguez 537

A first step towards variational methods in engineering F. Periago 549

Division in a binary representation for complex numbers D. C. Blest and T. Jamil 561

Microsoft Excel as a supplement to intermediate algebra L. J. Stephens 575

Tests of divisibility Y. Nahir... 581

Mathematical modelling of continuous biotechnological processes T. Pencheva, I. Hristozov and A. G. Shannon... 593

Inequalities and monotonicity of the ratio of the geometric means of a positive arithmetic sequence with unit difference F. Qi 601

Classroom Notes

Inattentive drivers: making the solution method the model M. McCartney 609

Superposition: new solutions from known solutions C. E. Roberts, Jr 621

Concavity and the second law of thermodynamics J. Dunning-Davies 627

The halving method for sample quartiles A. H. Joarder 629

A formula for the calculation of $\sum_{j=1}^{n} j^k$ M. H. Poursaeed 634

Issue No. 5, September-October

Using the intuitive rule more Amore B for predicting and analysing students solutions in geometry P. Tsamir... 639

Investigating students approval of a geometrical approach to differential equations and their solutions S. Habre 651

Technology-active mathematical modelling B. J. Ferrucci and J. A. Carter 663

An analysis of undergraduate core material in the light of hand-held computer algebra systems A. Pointon and C. J. Sangwin 671

A three-year perspective on conceptions of and orientations to learning mathematics of prospective teachers and first year university students A. Mji 687

Mathematica in context T. Langtry, M. Coupland and B. Moore 699

Singaporean students mathematical thinking in problem solving and problem posing: an exploratory study J. Cai 719

Classroom Notes

Two conditions for a quadrilateral to be cyclic expressed in terms of the lengths of its sides M. A. Rashid and A. O. Ajibade 739

Ahmes expansions of rational numbers of length two D. E. Dobbs and A. J. Hetzel 742

Waiting for a sequence pattern in independent multinomial observations M. A. Asiru 751

Useful mistakes B. Abramovitz, M. Berezina and A. Berman 756

Remarks on rational roots of a cubic W. Galvin and R. Vborn 765

A model for considering multicollinearity S. Lipovetsky and W. M. Conklin 771

The cardinality of even perfect numbers A. Durn 777

Polynomial solutions of the Laguerre equation and other differential equations near a singular point L. E. Levine and R. Maleh 781

Corrections to a well-known proposition concerning the two-dimensional density function M. A. Khuri and A. I. Khuri 787

A simple non-trivial student model of a bouncing soccer ball S. V. Joubert and M. A. van Wyk 792

Issue No. 6, November–December

Understanding A. C. Buxkemper and D. J. Hartel 801

New opportunities for encouraging higher level mathematical learning by creative use of emerging computer aided assessment C. J. Sangwin 813

Error bounds for quadrature methods involving lower order derivatives J. Engelbrecht, I. Fedotov, T. Fedotova and A. Harding 831

Goal orientation in mathematics education A. Khait 847

Properties of tangential and cyclic polygons: an application of circulant matrices A. Leung and F. Lopez-Real 859

Duffings equation and nonlinear resonance T. H. Fay 871

Microsoft Excel as a supplement in a high school statistics course A. R. Christensen and L. J. Stephens 881

Projecting rate of change in the context of motion onto the context of money J. A. Wilhelm and J. Confrey 887

Classroom Notes

A Generalization of Leibniz rule for higher derivatives A. B. Thaheem and A. Laradji 905

An iterative method for solving variable coefficient ODEs E. Deeba J. M. Yoon and V. Zaris 908

The integrity of certain series F. Z. Zhao and T. Wang 913

An equivalence relation H. W. Austin and H. Barzilai 919

The area under x^0 by geometry Z. ikić 923

Using the binomial series to prove the arithmetic mean–geometric mean inequality R. L. Persky 927

Estimation of the cross-product of two mean vectors H. Neudecker, R. Zmyślony and G. Trenkler 928

M-bonacci numbers and their finite sums J. Chamberlain N. Higgings and O. Yürekli 935

Computational and conceptual understanding of the connections among standard deviations z-scores and normal distributions M. Lopez Reyes 940

Application of the Sumudu transform to discrete dynamic systems M. A. Asiru 944

A generalization of the Euler–Fermat theorem R. T. Harger and M. E. Harvey 949
